

SOIL & GROUNDWATER REMEDIATION

United's experienced personnel have successfully constructed systems for the remediation of soil and or groundwater using designs and methods such as the following:

- Excavation
- Vacuum Extraction
- Encapsulation
- Soil Stabilization
- In-Situ Remediation
- Bio-Augmentation
- Onsite Land Farming
- Groundwater Extraction
- Slurry Cut-Off Walls

We recognize that many other services are available such as deep soil mixing, thermal and chemical treatment, and soil washing with variations to all of the above noted remediation methods. Our goal is to provide the most economical solution to solution to expedite the needs of our clients.
